Common Freshwater Fish Parasites Pictorial Guide: Monogeneans

Deborah B. Pouder, Eric W. Curtis, and Roy P.E. Yanong

Introduction

This publication is one in a series of pictorial guides that is designed to assist in the identification of common freshwater fish parasites. The publications included in this series are:

• Common Freshwater Fish Parasites Pictorial Guide: Sessile Ciliates
• Common Freshwater Fish Parasites Pictorial Guide: Motile Ciliates
• Common Freshwater Fish Parasites Pictorial Guide: Dinoflagellates, Coccidia, Microsporidians, & Myxozoans
• Common Freshwater Fish Parasites Pictorial Guide: Monogeneans
• Common Freshwater Fish Parasites Pictorial Guide: Digenean Trematodes
• Common Freshwater Fish Parasites Pictorial Guide: Nematodes
• Common Freshwater Fish Parasites Pictorial Guide: Acanthocephalans, Cestodes, Leeches, & Pentastomes
• Common Freshwater Fish Parasites Pictorial Guide: Crustaceans

The information provided in this guide is not intended to be a complete, detailed description of each parasite or parasite group and its characteristics but rather is intended to assist in the visual identification of some of the most common species or groups of parasites seen in freshwater fish. For further information on each parasite, refer to publications in the “Recommended Reading” and “Reference” sections below.

Guide Information

• Target Tissue: provides the location on/in the fish where the parasite is most commonly found.
• Characteristic: provides a brief description about the appearance of the parasite.
• Size: provides the size or size range of the parasite. (1 µm = 0.001 mm = 0.0001 cm) (µm = micron or micrometer; mm = millimeter; cm = centimeter)

• Movement: provides the type of movement, if any, of the parasite.

• Note: provides a brief comment of interest about the parasite.

**Printing Tips**

For the best results as a pictorial guide, print this document in color on photo quality paper at a photo or “best” setting.

References

**Monogeneans**

**Dactylogyrid**

**Target Tissues:** Primarily skin and fin

**Appearance:** Two pairs of anchor hooks; v-shaped “head”

**Size:** Approx. 0.3-1.0 mm in length

**Movement:** Free-moving, though anchor end often attached to fish tissue

**Note:** Egg-layer

**Gyrodactylid**

**Target Tissues:** Primarily skin and fin

**Appearance:** Two to four eye spots; one pair of large anchor hooks; scalloped shaped head

**Size:** Approx. 328-388 μm in length

**Movement:** Free-moving, though anchor end often attached to fish tissue

**Note:** Live-bearer; may be able to see fully-developed embryo with hooks inside adult
