

Common Freshwater Fish Parasites Pictorial Guide: Motile Ciliates¹

Deborah B. Pouder, Eric W. Curtis, and Roy P.E. Yanong²

Introduction

This publication is one in a series of pictorial guides that is designed to assist in the identification of common freshwater fish parasites. The publications included in this series are:

- Common Freshwater Fish Parasites Pictorial Guide: Sessile Ciliates
- Common Freshwater Fish Parasites Pictorial Guide: Motile Ciliates
- Common Freshwater Fish Parasites Pictorial Guide: Flagellates
- Common Freshwater Fish Parasites Pictorial Guide: Dinoflagellates, Coccidia, Microsporidians, & Myxozoans
- Common Freshwater Fish Parasites Pictorial Guide: Monogeneans
- Common Freshwater Fish Parasites Pictorial Guide: Digenean Trematodes

- Common Freshwater Fish Parasites Pictorial Guide: Nematodes
- Common Freshwater Fish Parasites Pictorial Guide: Acanthocephalans, Cestodes, Leeches, & Pentastomes
- Common Freshwater Fish Parasites Pictorial Guide: Crustaceans

The information provided in this guide is not intended to be a complete, detailed description of each parasite or parasite group and its characteristics but rather is intended to assist in the visual identification of some of the most common species or groups of parasites seen in freshwater fish. For further information on each parasite, refer to publications in the “Recommended Reading” and “Reference” sections below.

Guide Information

The following information is provided for each parasite on the guide.

-
1. This document is FA-108, one of a series of the Tropical Aquaculture Laboratory, Program in Fisheries and Aquatic Sciences, School of Forest Resources and Conservation, Florida Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida. First published: July 2005. Reviewed February 2011. Please visit the EDIS website at <http://edis.ifas.ufl.edu>.
 2. Deborah B. Pouder, Coordinator of Research Programs and Services; Eric W. Curtis, former Biological Scientist, and Roy P.E. Yanong, Associate Professor, Tropical Aquaculture Laboratory, Ruskin, FL 33570, Department of Fisheries and Aquatic Sciences, Florida Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida.

U.S. Department of Agriculture, Cooperative Extension Service, University of Florida, IFAS, Florida A. & M. University Cooperative Extension Program, and Boards of County Commissioners Cooperating. Millie Ferrer-Chancy, Interim Dean

- **Target Tissue:** provides the location on/in the fish where the parasite is most commonly found.
- **Characteristic:** provides a brief description about the appearance of the parasite.
- **Size:** provides the size or size range of the parasite. (1 μm = 0.001 mm = 0.0001 cm) (μm = micron or micrometer; mm = millimeter; cm = centimeter)
- **Movement:** provides the type of movement, if any, of the parasite.
- **Note:** provides a brief comment of interest about the parasite.

Printing Tips

For the best results as a pictorial guide, print this document in color on photo quality paper at a photo or “best” setting.

Acknowledgements

The authors thank Greg Vermeer for the photograph he contributed to this publication.

Chilodonella

Target Tissues: Skin, fin, gills

Appearance: Ovoid or kidney-shaped with bands of cilia along the long axis; dorsoventrally flattened; appears translucent

Size: Approx. 30-80 μm x 20-60 μm

Movement: Free-moving

Note: Often causes fish to excrete excessive mucus

Ichthyophthirius multifiliis

Target Tissues: Skin, fin, gills

Appearance: Amoeboid; C-shaped nucleus seen in “adults” only

Size: Trophont approx. 50 μm-1 mm; theront approx. 30 μm x 50 μm

Movement: Free-moving; rolling, amoeboid motion

Note: Life cycle includes stages on and off fish

Tetrahymena

Target Tissues: Skin, fin, gills, eyes, internal organs

Appearance: Ovoid with evenly distributed cilia

Size: Approx. 55 μm x 30 μm

Movement: Free-moving

Note: Commonly found on dead fish or detritus or in water with high organic concentration

Trichodina

Target Tissues: Skin, fin, gills

Appearance: “Flying saucer” or “scrubbing bubbles” shape

Size: Approx. 35-135 μm in diameter

Movement: Free-moving; whirling motion

Note: Common in water with high organic concentration
